SOFTWARE ENGINEER | FULL-STACK, REAL-TIME & AI SYSTEMS

Full-Stack Software Engineer with 2+ years of experience building scalable enterprise applications, real-time analytics platforms, and AI-enabled customer systems using **React, JavaScript, Python (Flask), PostgreSQL, and InfluxDB**. Proven experience delivering business-critical internal tools, dashboard systems, secure authentication workflows, and streaming data architectures in production environments. Strong background in **system design, API optimization, real-time visualization, enterprise authentication, and product ownership**. Built multiple production systems independently, including customer-facing platforms, admin dashboards, and AI chatbot workflows.

TECHNICAL SKILLS

Frontend: React, JavaScript, HTML, CSS, Vite, Next.js, Tailwind CSS, MUI, AG Grid, ECharts
Backend: Python, Flask, REST APIs, Flask-SocketIO, Firebase
Databases: PostgreSQL, InfluxDB, MySQL, Firebase
Tools & Platforms: Git, VS Code, Linux, IIS, Apache, Waitress, Ollama
Core Expertise: Full-stack development, real-time data streaming, dashboard systems, AI chatbot integration, Windows Authentication, deployment, performance optimization, system design

---

PROFESSIONAL EXPERIENCE

Software Developer

SPIN AU PTY LTD — Perth, Australia
Jul 2023 – Present - Engineer and maintain scalable full-stack enterprise systems using **React, Flask, PostgreSQL, and Firebase** supporting internal business workflows. - Built and optimized **real-time and historical data visualization platforms** using **ECharts +**

InfluxDB, enabling near real-time industrial data monitoring. - Delivered production-grade internal platforms including **Task Management System (TMS), CRM, SRM, and DMS**, improving operational efficiency. - Designed secure **Windows Authentication workflows via IIS** for enterprise-only internal applications. - Developed interactive analytics dashboards and reporting tools that improved data-driven business decisions. - Optimized backend APIs, SQL queries, and data pipelines for large-scale and real-time workloads. - Improved frontend architecture, reusable component design, and application responsiveness for business-critical tools.

Freelance Full-Stack Developer

Digital Fingers - Designed and built a **full-stack business platform** consisting of a public website and separate admin dashboard. - Developed customer-facing experiences including service pages, blogs, AI chatbot, and inquiry forms using **React**. - Built secure admin workflows for **blog publishing, customer inquiry review, chatbot logs, and content management**. - Implemented backend APIs using **Python Flask + PostgreSQL** for content workflows and customer message storage. - Integrated an **AI-powered chatbot using Ollama** to improve customer support and lead generation. - Delivered architecture, deployment, and stakeholder collaboration independently end-to-end.

React Developer Intern

Design Consulting
Dec 2022 – Feb 2023 - Developed reusable React UI components and improved frontend architecture. - Built responsive, user-friendly interfaces to improve user experience. - Collaborated with developers to ship new features and improve application performance.

SELECTED PROJECTS

Spin Trend Tool (STrend)

Built a secure real-time and historical visualization platform using **React, ECharts, Python, PostgreSQL, and InfluxDB**, featuring streaming data pipelines, dynamic charting, and Windows Authentication.

Digital Fingers Platform

Developed a multi-application business platform with a public website and admin dashboard supporting **AI chatbot workflows, blog CMS, customer inquiry management, and secure backend APIs**.

Task Management System (TMS)

Built an ongoing full-stack workflow and ticketing platform for managing team operations, tasks, and business processes.

Customer Relationship Management (CRM)

Delivered a production CRM system with enhanced usability, workflow automation, and version 2 release improvements.

Supplier Relationship Management (SRM)

Developed a supplier workflow platform for internal data management and production business operations.

EDUCATION

Master of Information Technology (In Progress)
University of the People

Bachelor of Information Technology
Federation University, Australia

ADDITIONAL VALUE

- Strong experience in enterprise internal systems and real-time industrial dashboards
- Hands-on product ownership across freelance and enterprise environments
- Passionate about AI-driven products, automation, analytics, and scalable system design
